4/23/2019	Chris	Side glue not sticking and glue spike issues. Checked nipper table squareness and correct size. Both checked good. Side glue had a lot of bubbles in it coming from moisture in the glue could possibly cause glue not adhere quickly. Glue pot height had to adjusted down to high causing the book block to flare which causes glue penetration in between the sheets. Test good.	4.5	\$98.00	\$441.00
